> Its pretty molecular, and initially designed as a high-throughput assessment of receptor binding and cell entry properties of B-coronaviruses to allow assessment of initial zoonotic properties. However, this also allowed us to determine the receptor for the novel virus really quickly (11 days after obtaining sequence info, or 8 days since ordering the synthesized RBD). Obviously, based on the sequence similarity of the RBD /RBM we had good reason to suspect it was an ACE2 binder, but this is the first formal proof (as far as I'm aware).

Subject: Update - nCoV budget projections/spending 2020

All,

It is likely that we will receive further requests from the Dept. about our nCoV \$ needs.

To that end I've attached the following template to consolidate those requests and so we can support a supplemental spending package, project out years and keep track of spending.

When asked, please work with the respective budget contact in your Division who will coordinate the submissions to myself , Wayne and Kun.

For now please proceed with your outbreak response activities. If you have an activity you must advance, but feel you do not have sufficient funds available, please get back to myself or Wayne.

Thanks

Martin

Subject: RE: nCoV budget projections/spending 2020

Heads up - OMB and HHS will likely request "spending information" and we have created the attached template to respond to that request.

At this time no action is required on your part.

We will let you know as soon as we are contacted by OMB and or HHS.

Thank You in Advance

Martin

I also have summarized your proposals from last Friday and have that information in a separate -similar format. That information is only for internal NIAID purposes. The main reason is that NIH, HHS and OMB must be in the loop before we spout off about needing additional funds. If you have a compelling reason to discuss that data please call.

Subject: FW: Best regards from Zagreb and some coronavirus questions

Hi Dan,

Please see message below from a colleague in Zagreb. I haven't seen any specific guidelines, but if there are, you probably have.

With regard to work on nCoV, Lisa, Mike and I have been in calls both with Hilary Marston's office (who is coordinating all of the NIAID efforts) and with WHO. Right now, there is no virus isolate available for study. In addition, all NIAID research needs to come from internal funds. (b)(5)

(b)(5)

Cliff gets back on Wednesday and I have this as one of the topics I need to address with him. I am free most of today if you want to discuss

Subject: Best regards from Zagreb and some coronavirus questions
To: Connie Russell (b)(6)

Dear Connie,

I hope you are happy in your new position and things are going well.
I appreciate some more information or advices regarding 2019-n-coronavirus if you have it.

We are also trying to prepare the best we can for potential cases to come.

For the time being, we plan to use disposable overcoat, goggles and masks (FFP3) in the admissions unit to protect doctors and nurses. In the isolation department we would use suits, goggles, FFP3 masks, and in intensive respirators with HEPA filters. Do you have any other suggestions?
Do you have any additional information about the treatment for now? Are the Chinese doctors only administer symptomatic therapy, or do they provide any of the antiviral drugs?
Is there reliable information on the possible transmission of the virus during incubation?
Any good advice or information would be welcome.

Thank you very much in advance and best regards,

Alemka

Subject: 2019-nCoV blog post for Science Speaks

Dear Dr. Lane,

IDSA has been coordinating press statements, news releases, social media, and resources for 2019-nCoV. In an effort to provide continued relevant updates are asking members of each relevant committee to provide additional details via our blog, *Science Speaks*. The idea is to cite the current situation as it applies to the existing asks and priorities of IDSA's committees (vs. a big picture analysis).

Are there 2019-nCoV initiatives NIAID/NIH is spearheading or considering, or challenges/progress/needs, that we can report on behalf of the Research Committee? An NIH guest blog post would certainly be wonderful, but if sharing bullet points or more general information is a more feasible option our Communications folks are happy to fashion background into a written piece. We'd like to keep members as updated as possible while respecting the many competing demands on your time and hopefully simplify the process.

We greatly appreciate anything you might be able to share and happy to discuss further anytime.

Best,
Jaclyn

**Containing new coronavirus may not be feasible,
experts say**

The new coronavirus emerging from China has sickened more than 2,700 and killed 80, and some infectious disease experts are warning that it may no longer be possible to contain. The virus has already spread to at least 14 countries and territories outside of mainland China, which have reported nearly 60 cases in total. The U.S. reported three new cases over the weekend, bringing its total to five — two people in southern California and one in Arizona, all three of whom had recently traveled to Wuhan. If the virus' circulation can't be stopped in China, experts say there could potentially be sustained spread around the world. “The more we learn about it, the greater the possibility is that transmission will not be able to be controlled with public health measures,” says Dr. Allison McGeer, a Toronto-based infectious disease specialist, who also cautions that the true severity of the outbreak isn't known at this point.

Caregivers feel listened to by health workers, but are rarely asked about needing help

While most family and unpaid caregivers looking after older adults feel listened to when talking with the adults' health care provider, a small new survey finds that few are asked about needing assistance. Here's more:

- **Interaction with health providers:** The vast majority of those surveyed said they always or usually feel heard by the older adults' health providers. At the same time, fewer than half of caregivers interact with clinicians.
- **Assistance:** Almost half of caregivers said they were never asked about needing help tending to the person under their

care, while about 20% said they were always asked. Those who interacted with health workers were more likely to be asked about needing assistance with caregiving.

- **Dementia care:** Those assisting adults with dementia were more likely to report being listened to, and asked about needing help and whether they understood the medications they were handling.

Equal access to care could help reduce prostate cancer disparities

The results of a new study find that having ready access to the same quality of care could reduce prostate cancer disparities between African American and white men. Looking at data from more than 60,000 African American and white men who sought prostate cancer care at the VA — an equal-access health system — scientists found that, compared to the general population, African American men were not first diagnosed with more advanced stages of the disease, nor did they have significant delays in receiving a diagnosis or care. The 10-year mortality rate among African American men was slightly lower — at 4.4% — than the 5.1% rate among white men. Nationally, Black men have a higher chance of dying from prostate cancer than white men, and the authors suggest the difference in the study could be because veterans have equal access to care of the same quality.

Inside STAT: 'Gurus of sperm': Ohana Biosciences takes a different approach to fertility

(MOLLY FERGUSON FOR STAT)

IVF “add-ons” — supplementary procedures that claim a more successful shot at a pregnancy, but are not necessary — are taking off, and Cambridge, Mass.-based Ohana Biosciences is getting in the game. The company’s focus is on sperm: improving its quality and motility to improve IVF or perhaps helping even people without fertility issues have healthier pregnancies or children. Ohana’s work is in early stages — its first clinical trial testing the company’s

technology began last September. Still, experts say that it's unclear whether improving the health of sperm has any long-term effects on the health of a pregnancy or a child, skepticism that the self-proclaimed "gurus of sperm" at Ohana will have to work to overcome. STAT Plus subscribers can read more from STAT's Kate Sheridan [here](#).

Trump is first sitting president to attend March for Life

President Trump on Friday became the first sitting American president to speak at the annual anti-abortion March for Life rally, which he called a "profound honor." In the past, Trump has described himself as "pro-choice," but since launching his presidential campaign and taking office, he has appointed anti-abortion judges to courts across the country, and reinstated — and expanded — the Mexico City policy that withholds international aid for abortion services. He referred to both these steps in his speech, but also made false claims about Democrats' support for the procedure "up until the moment of birth."

At the same time, the administration on Friday warned California that its law requiring all health insurers to cover abortion was violating federal law. The administration threatened to withhold Medicaid funding to the state — more than \$50 billion — if it did not comply.

Q&A: Behind the movie deal on one reporter's investigation into Purdue and the Sacklers

Los Angeles-based 101 Studios recently announced its plan to finance and distribute a feature film about investigative reporter David Armstrong — formerly of STAT, and now at ProPublica — and how he has worked for years to uncover how the Sackler family and Purdue Pharma contributed to the opioid crisis through aggressive marketing of its drug OxyContin. I spoke with Gita Pullapilly and Aron Gaudet, the screenwriters behind this new project, to learn more.

What inspired you to pursue this story?

Pullapilly: We had stumbled across the news articles a few years ago, and we were so impressed by the storytelling and the writing. These stories are just pretty incredible — the investigative reporting is fascinating, but also so detailed and specific. We both come from journalism, and it's hard to impress journalists, but we were so taken by it.

What are you hoping to impart?

Gaudet: I don't know if we'll ever tackle a more important story because of how many lives [the opioid crisis] has affected. It's so hard to keep people's attention — they may read an article here and there, but if we can get them into a movie theater for two hours and really lay out the story in a very linear, cohesive way for them to understand [because] it's really important for everyone to know the truth.

Pullapilly: It's inspiring to us to see what it takes to figure out the truth — and it can take years to do that.

Subject: RE: Coronavirus Outbreak spending

Martin, we are trying to clarify this request. Do you have what NIAID expects to spend this year from existing resources? ASFR would also like to know if there are any needs not being met with current resources. Perhaps that's what you mean for the ballpark estimate; until we hear otherwise I'd assume that NIAID could be directed to meet those needs and eat the cost.

Hi Cliff,

So as not to blindside you, here is a list of things to discuss when we meet. It is OK if we don't get through all of them. Some are just to update you on what has happened while you were away. Everything is going very well. I love it here.

Items to discuss

1. PMAP:
 - a. Revisions for 9 months vs 12 months
 - b. add CEPI SAC?
 - c. (b)(6)
2. CEPI conference call with Richard/Nicky?
3. Heinz visit February 27-28
4. Chinese coronavirus work at IRF?
5. DARPA project
6. BSL3 lab safety changes for U19 grant work on Alphaviruses
7. My conference call with Heinz and Dave Safronetz about Nigerian LASV
8. Shipment of RML samples to IRF
9. Travel:
 - a. May 5-6 Umea University (travel funding)
 - b. May 11-12 CEPI SAC, Oslo
10. Pathologists at NBACC
11. Gustavo: and sequencing

Thanks
Connie

Subject: Re: GCM call

I have heard that Bill Dowling (now CEPI) is in Geneva to help with the R and D blueprint activities.

On Jan 20, 2020, at 7:36 AM, Marston, Hilary (NIH/NIAID) [E] (b)(6) wrote:

WHO convened a Global Coordination Mechanism of the R&D Blueprint call this morning.

Epidemiology/investigations

- Total cases: 198 cases, 43 severe, 9 critical, 3 deaths
- Thailand – 2nd case is a Chinese person who traveled from Wuhan to Thailand; no clear info about market exposure
- Republic of Korea – traveled from Wuhan and developed symptoms on the 20th of January; detected by thermal screening
- Three confirmed cases outside of Wuhan in China – 2 new in Beijing detected on January 19, 1 in Guangdong
- Three confirmed cases in Japan
- Incubation period appears to be about 7 days (range 0 to 14)
- In Wuhan, environmental sampling studies are being conducted – so far 15 specimens are positive
- Epidemiological investigations ongoing regarding transmission routes (animal-to-human and human-to-human)
- Retroactive and active case finding
- Clinical case form

Diagnostics working group: All initial diagnoses based on sequencing; now PCR assays developed by multiple groups; guidance on laboratory diagnosis placed on WHO website. WHO is working on reference materials to validate tests. To date, no access to virus.

Data sharing

A number of manuscripts are likely to be in the works; ICJME policy states that it is critical that WHO sees data regardless of publication date. There should be pre-publication sharing of manuscripts with WHO.

Sequence sharing is going well – to date 11 Chinese, 2 Thai, 1 Japanese sequences have been shared.

Sample sharing

WHO ready to help with materials transfer agreements for the sharing of viruses. Defining objectives of sample sharing (what is planned with the samples).

Research plans: INSERM plans are under review by the French government. I gave a high-level overview of NIH research priorities.

Vaccines and therapeutics – high-level summary of landscape prepared and being refined. For both vax and tx, WHO envisions a master protocol.

DLH

Dear David and all,
I'd like to share our experience from the first imported case into Korea. This is an excerpt from our case report (not published yet)

Subject: Re: Checking in- Wuhan Coronavirus

Claudia,

Thanks very much for reaching out. If you could provide a bit more detail on what you would see as the best situated sites (infrastructure-esp personnel; politics; case load) it would be of interest.

Thanks,

Cliff

Dear Dr. Lane,

I imagine 2020 is off to a busy start for you and your team with the ongoing network activities, upcoming PREVAIL events and the recent coronavirus events to name a few.

We are tracking the coronavirus news closely and are always ready to assist in any way we can. I wanted to send you a note to remind you of the amazing network we set up for TB clinical trials in China with NIH funds that is now in excess of 20 sites including general hospitals and ID units. We know that some of those sites are seeing coronavirus patients now. We also would be able to mobilize quickly in neighboring countries that are also seeing cases (e.g. Thailand, Vietnam, Cambodia, etc.).

<image002.png><image010.png>

Please let us know if we can provide any additional information and support to address the growing crisis.

Thanks for taking the time to look at one more e-mail.

Claudia
