Subject: National Blood Supply

Dear Dr. Fauci: I am an ex-alumni from the Department of Transfusion Medicine at the NIH. I am sorry to bother but I wanted to notify the Coronavirus Task force about potential blood shortages if blood centers get blood drive cancellations due to the fear in the public.

We are starting to see this locally and my concern is that other blood centers in the country are facing the same issue.

I tried to contact the office of the vice president, and all I could do was to send an email, which might get lost among thousands.

I am hoping you see this and perhaps bring this to the table. Blood centers use updated federal information when educating donors, staff and hospitals but the current fear is triggering blood drive cancellations. This might be experienced nationally and will impact the national blood inventory.

Thank you

Importance: High

Dear Dr. Fauci,

First let me say we are very grateful to everyone at NIH for working to contain the coronavirus, especially your team at the NIAID. Your interviews are articulate and informative - they give Americans some comfort and some concrete ways to think about protecting themselves and what to expect. It must be a stressful time and we want you to know that we have confidence in our NIH and CDC to contain it and to help stave it off globally as well.

On a happier note, I wanted to reach out and THANK YOU for all you do for our Down Syndrome research through the transformative trans-NIH INCLUDE program. It is making a HUGE difference!!

To this end, I am writing today in hopes you will be able to join us on Wednesday, May 20th for our AcceptAbility Gala at my head table. Attached is our save the date for the event. We are excited to have Caroline Cardenas as our 2020 Ambassador, Rep Pete Stauber as our keynote ([REDACTED] (b) (6) [REDACTED]), and Reps Lucille Roybal-Allard and Jaime Herrera Beutler are Global's *Quincy Jones Exceptional Advocacy Awardees*. We believe the gala will be quite lovely and meaningful to so many.

We do understand that attendance cannot be considered if the coronavirus situation worsens. However, if things are looking much better (touch wood) we would be deeply honored if you and our friends from NIAID could attend. Looking forward to hearing from you soon.

All the Best, Michelle and family

Subject: Conference Planning with respect to coronavirus.

Dear Dr. Fauci

Dr. Miriam Kelty formerly of NIH referred me to you. I am on the board of directors and planning committee of the Applied Superconductivity Conference that is planned to be held in Tampa, Florida the last week of July. Over 50% of our expected 1500 attendees are from outside the continental US. Our planning committee appears to have three options:

1. Hold the conference on the original dates
2. Postpone the conference a few months
3. Cancel the conference

It would be most helpful to decision process if you can give us a prediction (anonymously of course) of how the effects of the virus will pan out.

I look forward to your reply.

On Wed, Mar 4, 2020 at 9:45 PM Fauci, Anthony (NIH/NIAID) [E] (b) (6) > wrote:

Dear Ms. Angel:

The severe complication of coronavirus are heavily skewed towards the elderly and those with underlying conditions (Heart disease, Chronic lung disease, kidney disease, diabetes, etc.) Most of the pneumonias are pure viral pneumonia and so this vaccination will not help that. However, on the chance that you have a pure viral pneumonia that gets secondarily complicated by a bacterial pneumonia (pneumococcal) the vaccine would be beneficial. If you are 65 years of age or older, you should get the pneumonvax23 vaccine anyway regardless of the risk of coronavirus infection.

Thanks,
Tony

Subject: A humble request for your wisdom

Good evening!

I know you must be completely busy and inundated with people wanting your time. I apologize that I have nothing to offer in return and completely understand if you don't have time to answer. I called the CDC but they were totally unhelpful. I have a question that makes sense to me and I was hoping you could answer and the answer might help a lot of people.

I understand that over time I, and everyone else, will very likely get COVID-19 and that most people won't even realize it because it will be minor. I get that, so this is not a panicked question.

I also understand that while most cases will not be severe, the bad cases are complicated by pneumonia.

So my question is: If someone has been vaccinated against pneumonia, will that offer any protection in the event that they do contract COVID-19 and perhaps provide some barrier against the worst effects?

Thank you for your time if you have read this and I apologize if this is just another in a long line of ignorant questions, but it made sense in my brain so I thought I would at least ask.

Be well, be happy, and may life be kind and generous to you, those you love, and those who love you!

sincerely,

Aliantha Angel

Subject: Coronavirus Question

Dear Dr. Fauci,

I apologize in advance for this email. I am *sure* you are too busy these days to answer coronavirus questions from the general public. However, you are the only individual I know of who can be trusted to speak intelligently about the pandemic.

I know there is no preventive vaccine or cure, and there probably won't be for quite some time—despite what our ersatz President says. But there is something I don't understand. Since the coronavirus causes pneumonia, wouldn't it be a good idea to vaccinate more of the general population with Pneumovax 23 or Prevnar 13? That certainly wouldn't prevent people from catching coronavirus, but perhaps the resulting pneumonia onsets might be a little weaker/short-lived? [REDACTED] (b) (6)

[REDACTED] I figured it couldn't hurt, right?

Bravo for your efforts to keep our population intelligently informed on this situation.

Sincerely
Richard E. Silverman

Subject: Meeting to Assess Evaluation of COVID-19 vaccine candidates for risk of enhanced disease

Dear Doctor Fauci,

I am writing to you as a member of the SPEAC project which CEPI has funded to assist with the evaluation of the safety of vaccines in their portfolio. As part of this effort, we are assisting with developing preclinical and clinical testing criteria to evaluate the risk of enhanced disease following vaccination with COVID-19 vaccine candidates. As you know, this had been an issue with some prior SARS vaccine candidates.

We are convening a two day virtual meeting of experts via video conference next week on March 12 and 13 between 8 am and 1 pm Eastern time each day. Participants in the meeting are shown in the attached agenda but include Paul Henri Lambert from Geneva and Barney Graham from NIH. The meeting will actively involve the participants on the agenda the first day

and on the second day the meeting will be open for several peer reviewers including Stanley Plotkin and Andy Pollard to review and comment on possible small and NHP animal models as well as appropriate immunologic testing to be done in early phase one trials.

I am wanted to make you aware of the meeting so that you could attend all or part as an observer if you wish but also to invite you to consider joining on day two as one of our formal peer reviewers. The goal of the meeting would be to share recommendations with CEPI COVID-19 developers as well as other interested parties.

Any comments you have on the agenda or draft questions for consideration would be greatly appreciated.

I look forward to hearing back from you.

Dear Dr Anthony S Fauci,

My name is Valeria Popova, I am the senior editor of Channel One (Russia). We would like to invite you to take part in the popular international Russian-American project on Channel One. The big game is a television program, within the framework of which two points of view on international events are presented: American and Russian.

One of the presenters of the program is Dmitry Simes, chairman of the Nixon Center, a US citizen. He was foreign policy adviser to former US President Richard Nixon.

Only high-ranking officials participate in this discussion: presidents, diplomats, heads of ministries.

This is an honest and reasonable discussion. It would be a great honor for us if you joined her and discuss with our experts about situation with coronavirus. We work live and can use teleconference or skype for communication.

Hope to cooperate!

Channel One is the broadcasting leader in the Russian Federation. 250 million viewers in Russia and abroad. Today, Channel One programs have the opportunity to watch 98.8% of Russians and more than 250 million people in the world.

Channel One is the recognized leader of the Russian television, the most popular and favorite Russian-language channel in the world. It started broadcasting in April 1995

and became the successor to the state television and radio company Ostankino, which was the main broadcaster in the USSR and covered 99.8% of the population of Russia. Channel One's daily programs: the best entertainment shows, unique documentaries, latest news and analytics, the most headline movies and TV premieres, exclusive sports broadcasts and popular Russian music. Channel One combines innovative television broadcasting concepts, the vastest national traditions and cutting-edge global trends in a unique format.

Hope to cooperate!

Sincerely,
Valeria Popova

As promised, here is the big ticket item I wanted to flag for you. I was waiting to get through yesterday's hits to loop you in as to not overwhelm you. I have been speaking with the WH and VP's office to see if Dr. Fauci is available to join CNN this Thursday for our global town hall but wanted to make sure you have the info. Would you mind checking to see if he's avail?

Info:

We are reaching out to invite Dr. Fauci to join Anderson Cooper and Dr. Sanjay Gupta as our featured guest on the upcoming CNN special town hall - *Coronavirus: Facts and Fears*.

THE LATEST:

This Global Town Hall program will broadcast in front of a live audience [from 10pm-Midnight EST on Thursday March 5](#) from the CNN studios in New York City. We would cover all expenses for someone from the task force to join us live in NY. If Dr. Fauci is unable to come to NY, we will take him remotely from DC.

Coronavirus: Facts and Fears will feature interviews with a wide range of front-line experts fighting to contain coronavirus, along with patients and others who have been directly impacted by it's spread. We're really hoping to include a voice from the administration in order to comfort and inform our worldwide audience.

Thoughts?

Thank you!

Hello, Dr. Fauci,

My name is Donna Prosser, and I am the Chief Clinical Officer at the Patient Safety Movement Foundation. We are planning to host a webinar on Friday, March 6 at 8:00am PST to update our network on the coronavirus outbreak. Our network consists of 4,710 healthcare organizations across 46 countries, as well as patients, families, individual clinicians, and technology companies across the globe, who partner with us to achieve our goal of eliminating deaths from medical error.

During Friday's webinar, we plan to focus on how to keep patients safe from harm during this outbreak, and would love to have someone with your expertise join the call for a brief comment. Would you by any chance be available and willing to speak with our network sometime between 8-9am PST? We would be grateful for any amount of time that you could spare during that hour.

Thank you for your consideration!

Donna

Subject: How to put COVID-19 statistics in perspective

Today (March 3), CNN featured a discussion with NY Gov. Cuomo regarding a new COVID-19 case in NY City. He happened to note that there are currently about 15,000 patients in NY hospitals with the flu. Although multiple government agencies, scientists and health experts keep reminding us that there are far more cases, hospitalizations and deaths each year from influenza than this coronavirus, it strikes me that a more effective, more visual and less fear-producing way of presenting this information would be to present the current number of cases, hospitalizations and deaths from EACH of these diseases side by side. If the number of flu cases, hospitalizations and/or deaths isn't available on a daily basis, we could use extrapolations based on known rates. I think this would certainly go a long way to putting the relative risks of these diseases in clearer focus.

Subject: Idea to help with Coronavirus infection

Dr. Fauci,
I first want to thank you for your service and efforts in combating this international health problem.

I'm neither a physician or a scientist so please accept my apology if my idea is simplistic or isn't feasible. But I was thinking about some of the information presented on why it seems to be less prevalent in children. One theory is that they are exposed to so many other coronavirus's that they experience cross-protection. So I was wondering if anyone had investigated the idea to flood adults with other, less lethal, coronavirus's as a way to develop some level of immunity? Ideally coronavirus's that are a match to what children would be exposed to is what I'm suggesting here. I wouldn't expect that this will totally protect an adult but it might reduce the severity of the illness if an adult becomes ill and help while a vaccine and treatments are launched.

Thank you for considering this idea.

Best,
Jeff

Jeffrey Levy

Importance: High

Dear Dr. Fauci -

Thank you for helping millions of people with your research over the years.

The following information was culled from <http://poleshift.ning.com>.

Perhaps this article may help you and your colleagues develop a vaccine that may combat the Corona Virus. You were the first one I thought of who may be able to deem its worth and explore its research for practical purposes.

Some of the links have included nih.gov so maybe your colleagues have already read this.

With my limited medical knowledge, I have taken the liberty to highlight key points that seem important.

Wishing you and yours all the best for remaining healthy in Mind, Body & Spirit.

Dear Dr. Fauci,

Thank you for your useful [editorial](#) published in NEJM last week, it helps confirming that the situation does not need to be as grim as the panic that most people are experiencing.

I am writing an editorial and hoping to submit it to The Lancet soon. Differently from NIH/US Government institutes, I have more room for reflection in my viewpoint.

For that reason, I was wondering if I can have a call with you to get your opinion/advice on the direction of my editorial. I know how busy you are and I can understand if you do not have the time, but if by chance you are willing to have this call, I'll be happy to share my editorial's draft first. As a background, I am an EIS graduate (class of 2009), and trained by Robert T. Chen.

Subject: Zinc gluconate by inhalation for early coronavirus in elderly?

Dr Fauci,

Since the elderly's response to pulmonary coronavirus infection may be impaired, especially in those with a chronic disorder, is there any information re: delivering by inhalation, low concentrations of a Zinc salt. Is there a potential rationale in early coronavirus infection to try to minimize serious pneumonia, were such inhalation shown to be reasonably safe?

Thank you,

Arthur Bobrovc, MD
Stanford and Palo Alto VA

Subject: Coronavirus: Six Eyed Sand Spider, Habanero, water, Qi

Dr. Fauci,

(b) (6)
. I am an author on a Chinese form of healing called Qigong (a field I have studied for over 30 years), and am exploring Coronavirus from the perspective of a combination of the venom of the Vietnamese Six Eyed Sand Spider (entering the cells externally), Habanero capsaicin entering cells internally, the elevated water levels of infants and children and their higher levels of Qi in relation to them not getting the disease, and Qi from Traditional Chinese Medicine, Acupuncture, and Qigong.

I believe that the above combination can be beneficial in the study of Coronavirus. I am sure you are extremely busy and I am but a simple author but I just wanted to try to touch bases in case the above might help.

I live in (b) (6).

I would be truly honored to hear from you.

Subject: Possible treatment of COVID-19 pneumonia

Dear Dr. Fauci,

Nitric Oxide (NO) has been shown to contribute to the pathogenesis of influenza virus-induced pneumonia in mouse model (Zablockiene et al., 2012).

Zablockiene B, Ambrozaitis A, Kacergius T, Gravenstein S. Implication of nitric oxide in the pathogenesis of influenza virus infection. *Biologija* 2012; 58(1): 15-25.

NO overproduction in influenza virus pneumonia results from a sustained stimulation of inducible Nitric Oxide Synthase (iNOS) (Akaike et al., 1996).

Akaike T, Noguchi Y, Ijiri S, Setoguchi K, Suga M, Zheng YM, Dietzschold B, Maeda H. Pathogenesis of influenza virus-induced pneumonia: involvement of both nitric oxide and oxygen radicals. *Proc Natl Acad Sci U S A*. 1996 Mar 19; 93(6):2448-53.

NO overproduction in influenza virus-induced pneumonia can generate highly reactive oxygen species, peroxynitrite, via radical coupling reaction of NO with superoxide

[resulting from influenza virus-induced increased levels of xanthine oxidase (XO) (Maeda and Akaike, 1998).

Maeda H, Akaike T. Nitric oxide and oxygen radicals in infection, inflammation, and cancer. *Biochemistry (Mosc)*. 1998 Jul; 63(7):854-65

Peroxynitrite causes oxidative tissue injury through potent oxidation and nitration reactions of various biomolecules (Akaike and Maeda, 2000).

Akaike T, Maeda H. Nitric oxide and virus infection. *Immunology*. 2000 Nov; 101(3):300-8.

The crucial role of NO in influenza virus-induced pneumonia was demonstrated on iNOS gene knockout mice: at inocula sufficient to cause consolidating pneumonia and death in the wild-type control mice, iNOS gene deficient mice survived with little histopathologic evidence of pneumonia (Karupiah et al., 1998).

Karupiah G, Chen JH, Mahalingam S, Nathan CF, MacMicking JD. Rapid interferon gamma-dependent clearance of influenza A virus and protection from consolidating pneumonitis in nitric oxide synthase 2-deficient mice. *J Exp Med*. 1998 Oct 19; 188(8):1541-6.

Both influenza and coronaviruses could have the same pathogenetic mechanism of inducing pneumonia, namely harmful overproduction NO.

I would like to present you my innovative idea: Suppressing NO overproduction in COVID-19 complicated to pneumonia with Methylene Blue (MB)

Arguments pro:

MB is known as a guanylate/guanylyl cyclase inhibitor but it is mainly a NOS inhibitor (nNOS and iNOS).

MB is an inhibitor of superoxide generation by xanthine oxidase and NADH/NADPH oxidases.

MB is a small molecule capable to penetrate in tissues and cells

MB was administered intravenously in patients with refractory septic shock and Hepatopulmonary Syndrome of advanced liver cirrhosis.

MB administered intravenously will definitively reach the cells where NOS is induced by COVID-19 complicated by pneumonia both in animals and humans:

- Airway epithelium (including alveolar epithelial cells);
- Alveolar macrophages;
- Capillary/vascular endothelium (endothelial cells).

MB is an inexpensive medication.

MB is non-toxic molecule in humans

There are only a few cases of MB toxicity published in the literature. These cases occurred in very peculiar situations:

Hemolytic anemia in patients with G6-PD deficiency

Severe neuropathology after intrathecal administration of MB

Eye injury after topical use of MB

Tissue necrosis due to the extravasation of injected MB

Jejunal atresia following intra-amniotic MB

Serotonin reuptake inhibitors (SRI's) interact with MB, causing a serious adverse reaction consistent with serotonin syndrome.

Very truly yours,

Paul Tone, MD, PhD

Subject: Dr. Fauci. I have a possible reason children are immune to the coronavirus. Please read

Hello Dr. Fauci. I am a (b) (6) pharmacist from Ontario, Canada. I was just reading an article that stated covid-19 cases in children under nine y.o. are almost non-existent. I wondered why, and then an answer dawned on me. They have an immunity because one of the childhood vaccines all children get is giving them cross immunity to coronavirus as well. A study should be done immediately to see which one gives cross immunity, if indeed that is the reason for their seeming immunity to this virus. The immunity must wear off over time which is why adults and seniors seem to lack prior immunity and get sick. This hypothesis is certainly worth investigating. If this is what is happening, maybe millions of lives could be saved by a simple booster of an existing vaccine. Please let me know your thoughts on this matter.
Thanks for your time. Rob

Hello Dr Fauci,

Hope you're well. I'm a producer for Sky News, looking after our flagship evening programme Sky News Tonight 7-10pm UK time (2-5pm ET).

I was wondering if you might be available for an interview on the coronavirus outbreak? Either today or another day this week.

Happy to explain in more detail.

Any questions, please let me know.

Best,
Jakub

Subject: Can we get comment please?

Folks, we're doing a story that focuses in part on the administration's conference call from last Thursday noon about a decision to send out more CDC coronavirus assays despite the fact that they had become contaminated and compromised. We understand that Dr. Fauci was one of four federal doctors (the others being Drs. Hahn, Shuren and Shah) who strongly recommended the assays not be sent out. I want to give Dr. Fauci a chance, on or off the record, to comment on the story please.

Thank you,
Tom Burton

Subject: Questions from Sen. Alexander

Hi Laura and team,

Thanks for all your work in advance of tomorrow's HELP hearing. Below are specific questions that Sen. Alexander plans to ask Dr. Fauci and would greatly appreciate concise answers to – he is happy to allow Dr. Fauci to elaborate if there is additional time. Additionally, he plans to ask Dr. Schuchat a few questions about CDC covering patient costs from quarantine.

Thank you very much and look forward to seeing you all or your colleagues tomorrow.

Best,
HELP team

Questions for Dr. Fauci:

1. How many cases are there in the world? In the U.S.?
2. How many deaths so far in the world? In the U.S.?
3. How many countries have cases of the coronavirus?
4. How do you know if you have the coronavirus?
5. What are the symptoms?
6. How do you protect yourself?
7. Should we all be wearing masks?
8. If not, why should health care workers have to wear masks?
9. What are the most effective ways to protect your families?
10. If someone has coronavirus symptoms, what should they do?

11. If a doctor has a patient with these symptoms, what should they do?
12. Who is most at risk?
13. What is the mortality rate?
14. Can you explain why there have been relatively few reports of cases in children?
15. This is the peak of the flu season –
 - a. How many flu cases have we had this year so far?
 - b. How many deaths have we had this year from the flu?
 - c. How is the coronavirus different from the seasonal flu?
 - d. Is it possible that we could reduce the infections or deaths from the seasonal flu because you need to do the same things to protect yourself for both types of viruses?
16. Can a person transmit the virus even if they are not showing symptoms?
17. Are your agencies doing any research to determine when exactly an individual may transmit the virus to others?

QUESTION FOR DR. SCHUCHAT:

- If a patient is under a federal government-required quarantine, who pays the bills?
- Does their insurance pay first, and then does the CDC cover the remaining bills as the payer of last resort?
- If CDC is the payer of last resort, does the agency pay the doctor or the hospital directly – or is the patient obligated to send their bills to the CDC?
- How and when is this information made available to the patients under a federal government-required quarantine?

Subject: Re: Q

This is the descriptive portion of my column. I don't want to over or under-state:

America is entering a disturbing new stage in the coronavirus outbreak. There has been community spread in at least one and likely two locations in Washington State. And it appears the virus was being transmitted for at least a few weeks before current cases were recognized. So we can expect dozens or hundreds of cases in those locations unless contact tracing is especially efficient.

That means the disease is loose and easily transmitted.

The crucial issue now is the real mortality rate, which remains uncertain. The stated mortality is 2 percent. American experts are hoping the rate turns out to be considerably lower. But the math remains troubling in any case. If only 5 percent of the population eventually gets infected (which is on the low side of some estimates) and the mortality rate is 1 percent, there still would be a few hundred thousand deaths.

At this stage, the main tool that public health experts have is social distancing – the attempt to keep as many people as possible in affected areas out of sneezing distance from one another. This means measures such as closing schools, cancelling events in theaters and stadiums and encouraging employees to telework. States and localities ultimately make such decisions rather than the federal government. But according to some health experts I consulted, Washington State should be taking such measures right now. The effectiveness of social distancing is limited when action comes too late or ends too early.

The goal of such policies is to keep the Ro (reproduction ratio) as low as possible. When people are in close proximity, a single infected person can spread the disease to several others, boosting the Ro of the disease as high as 2 to 3 and causing an exponential increase in cases. If the Ro is less than one, the epidemic will gradually decline and stop on its own, with or without a vaccine.

A vaccine, however, would be tremendously helpful. There are at least ten vaccine development projects underway. But the one furthest along at the National Institutes of Health (NIH) is still about six weeks away from starting the process of **a phase 1 trial in human volunteers that will take 3 to 4 months to complete and to show that the vaccine safe and produces specific antibodies. A phase 2 trial will follow and will take at least 6 to 8 months to determine if the vaccine is efficacious in people at risk for infection.** Then production would need to be scaled up by a willing pharmaceutical company to deal with a global crisis. All this **in total will** take at least a year – assuming there are no unpredicted scientific obstacles in the way.

On Mar 2, 2020, at 7:54 AM, Fauci, Anthony (NIH/NIAID) [E] <[REDACTED]> (b) (6) wrote:

Mike:

Social distancing is not really geared to wait for a vaccine. The major point is to prevent easy spread of infections in schools (closing them), crowded events such as theaters, stadiums (cancel events), work places (do teleworking where possible). States and localities make these decisions, not the Federal government. The goal of social distancing is to prevent a single person who is infected to readily spread to several others, which is facilitated by close contact in crowds. Close proximity of people will keep the Ro higher than 1 and even as high as 2 to 3. If we can get the Ro to less than 1, the epidemic will gradually decline and stop on its own without a vaccine.

Is the overall strategy for social distancing just to keep the percentage of Americans who get the disease low until a vaccine is available? This seems much harder to do in a free society. Does this mean closing schools? Public transport? Do states and localities make such decisions?

Thanks for the note. We are clearly getting "community spread" in at least one and likely two non-contiguous locations. It was likely spreading in Washington State for at least a few weeks before the current cases were recognized, which means we can expect dozens and dozens of cases (or more) in that location unless we are very lucky and/or the contact tracing is highly efficient. The precise mortality rate is still uncertain. The stated

mortality is 2%; however, even if it is half that (1%) and only 5% of the population get infected, you are correct in that we can have a few hundred thousand deaths. The really critical issue is what the mortality rate actually turns out to be. I am hoping for a considerably lower mortality rate, but that might be wishful thinking. Whatever it turns out to be, the major tools that we have are public health measures, particularly social distancing, which we have to start doing right now in Washington State and thinking about in other locations. That is really the major weapon that we have. Even though we go into phase 1 with one candidate vaccine in about 6 weeks, vaccine is out of the question for at least a year or more if you want to make sure that you have an effective vaccine, i.e. some efficacy data before massive deployment.

We are meeting with pharmaceutical executive today and I will bring up the issue of what the fastest possible timeline would be to have a deployable vaccine.

(b) (6)

. I hope that you are well.

Best regards,
Tony

Tony,

I was with Francis yesterday, and the news seemed pretty sobering. It seems like the virus is out in the general population in the Pacific Northwest and Silicon Valley. A pandemic now appears likely. Francis gave me a guesstimate that 5 to 20 percent of the US population may end up infected. Depending on the mortality rate, this could result in hundreds of thousands of deaths.

Not for attribution in any way, is this a fair summary? How and when will we know if the disease is on this track? Do we have any better info on mortality yet?

And is there any news on the vaccine front? As I understand it, we are not even to Phase 1 trials on anything. If a vaccine is promising, are we talking about late Fall as the earliest possibility? And are there any substantive measures that could be taken to make sure pharma steps up to produce a vaccine on a massive scale once we have it?

I'm not sure Americans have been adequately prepared for this possibility. That is partly a political problem (in my view). But what needs to happen soon to get people prepared?

Hope you are holding up well under all of this and taking care of yourself.

Mike

Subject: 60 Minutes / COVID -19

Dr. Fauci:

Good morning.

I know you are busy, so forgive me for reaching out directly, but time is of the essence.

I know you spoke with Jon about doing a 60 Minutes story on COVID-19.

We are interested in potentially crashing a story for this weekend.

Is it possible for us to have a quick brainstorming phone call on what such a story might include if based at NIH with you?

Some ideas...

Following you closely as you engage in meetings, getting up to date info, giving your opinion, going to task force meeting at WH or elsewhere.

Are you using the same "DNA platform" you showed us in the Zika story to build a potential vaccine for COVID-19? Or is it another approach?

Will you be meeting with any patients who are currently infected? Bringing any patients to the NIH for care/evaluation?

Let us know when you can talk.

Denise

Subject: Re: Is this true?

I have been very explicit in stating publicly that I am not being muzzled or censored. I say exactly what I want to say based on scientific evidence, I have stated this on multiple TV programs over the past few days including at a major press conference with many, many reporters present including several TV cameras. I could not possibly be more public about this. No censor. No muzzle. Free to speak out.

On Mar 2, 2020, at 9:11 AM, Shlomchik, Mark Jay
<MSHLOMCH@pitt.edu>wrote:

OK, well that is good to know. It has been reported by many outlets including the NYT. So if not true I think it is critically important for you to say so publicly and show that it is not the case. It is critical, critical that we all have faith in the science and medical leadership. Your personal integrity is at stake here in the community and the world, and is a proxy for the integrity of science and medicine.

According to one house member, the following:

Garamendi told MSNBC's Hallie Jackson that Anthony Fauci was scheduled to do all five major Sunday talk shows, but says Fauci canceled the appearances after Vice President Pence took over the administration's response to the disease.

Trump on Wednesday named Pence as the official overseeing the government's response.

"I can repeat what he said, he said, 'I was not muzzled. However, I was to go on the Sunday talk shows five of them. The vice president's office then took over the control of this situation, and told me to stand down, not to do those shows,'" Garamendi said, quoting Fauci.

We cannot mince words about this or have nuances. If you were told not to appear on Sunday talk shows, then a reasonable person would have to assume your speech indeed is being controlled. Whether you call it "muzzled" or censored is a matter of semantics. Is it factual that you were told/asked not to appear on these shows as had been scheduled?

I hope you understand my reason for and level of concern. I am certain it is shared by many of your colleagues and citizens.

Best,
Mark

Subject: GPMB: MESSAGE ON BEHALF OF THE CO-CHAIRS: UPDATE

MESSAGE ON BEHALF OF THE GPMB CO-CHAIRS DR BRUNDTLAND AND MR SY

Dear Board members,

Thank you to those of you who joined the call on Thursday on short notice.

In light of our discussion, we would like to update you on a few matters:

- **Coronavirus outbreak.** We have asked Jeremy Farrar to act as the Board's focal point on the COVID-19 outbreak, to represent and advise the Board on the science of the outbreak and the financing of the response. We thank Jeremy for agreeing to take on this role.
- **Follow-up Board teleconference call.** Since many of you were unable to attend Thursday's call, we wish to propose to hold a follow-up Board teleconference call on **4 March at 14:00 Geneva time**. The purpose of the call will be to discuss the coronavirus outbreak, including Jeremy's proposal for Board action on financing. We would appreciate if you could confirm your participation to Amélie Rioux <(b) (6)>. A more detailed agenda and call-in details will be shared shortly.
- **In-person Board meeting.** We wish to confirm that the next in-person Board meeting will take place **Tuesday-Wednesday, 5-6 May 2020, in Geneva**. The meeting will be an important opportunity to further discuss strategic issues as well as a draft of the annual report. We will communicate further on logistical details.

As always, thank you for your support and continued engagement.

With kind regards,

Gro and As

Dear Dr. Fauci (and Hilary, if you end up doing this event as ASF's back-up),

I've attached an "event rundown" for the Harvard Forum Webcast, which is scheduled from 11:40-1pm on Monday 3/2—a moderated panel discussion. This is a document prepared by the event organizers outlining the run of show, noting what questions the moderator will pose, and some suggested points the organizers thought you might touch on in your answers.

Although the organizers prepared this document following a planning call, they have made it clear that the "talking points" in this document are of course not a script. I have taken their document and highlighted where you appear. I have also added some comments. Let me know what you think. There are no slides for this event.

Let me know if you would like to discuss further over the weekend or if you'd like anything for preparation.

Sincerely,

Andrea

Subject: personal Immune baseline and its impact on infection and vaccine responses

Dear Dr. Fauci,

Hope you are doing well despite the rapidly evolving situation with COVID-19.

I wanted to send you a paper we just published last week that you might find relevant – please find attached and a NIAID piece below.

<https://www.niaid.nih.gov/news-events/immune-system-status-predicts-future-responses>

This paper asks the question of why do individuals mount variable immune responses to vaccines, infections, and diseases. This extends from our earlier work on baseline predictors of influenza vaccination responses that you highlighted as a NIAID Advance in 2014. A key message is that genetics is often unlikely the answer, but the status of the immune system before the perturbation may offer clues – here we identified such an immune cell circuit involving pDCs-Type I IFNs prior to perturbation in humans and found that its status can predict vaccination and lupus disease activities and is temporally stable within individuals for months.

(b) (5)

Many thanks!

Best wishes,
John.

Subject: Outreach from STAT

Tony,

I know you're swamped but I'm wondering if we could arrange for you this week to take questions from our readers about coronavirus. All of our coronavirus coverage is in front of STAT's paywall and we'd see your contribution as an enormous public service.

We would solicit questions for a "live chat" from readers -- and you could pick and choose which ones you want to answer -- and write most of them in advance.

Among other leading figures, we've done this format twice with Nobel winners and it's quite popular. <https://www.statnews.com/events/stat-live-chat-chat-with-a-2019-nobel-winning-scientist/>

With Helen Branswell, Sharon Begley, Matt Herper, and our whole team, we pride ourselves on covering the coronavirus in the most authoritative and fair-minded way. We've developed a tremendous audience for this coverage. <https://www.statnews.com/tag/coronavirus/>

Our readers are fairly sophisticated on health and medicine, and we're looking to focus on the health aspects, not the White House politics.

In addition, I'd be grateful if you'd consider writing another First Opinion for us, maybe on lessons you've learned regarding other outbreaks and how that might be relevant with coronavirus -- or whatever you'd like.

Your voice of course is very important and authoritative and we'd be grateful to have it again in STAT.

All best,

Rick

Subject: question from BRT

Dr. Fauci,

I hope you are well.

Last February, I moved to Business Roundtable, which represents CEOs of large U.S. companies. Josh is the BRT CEO, and it's been great to work with him again.

We wanted to check with you on something quickly. Traditionally, BRT has not weighed in on global health security policy, but COVID-19 has served as a reminder that global companies need to be strong advocates for global public health and security. If you had your choice, what would you want to see our companies advocating for, specifically?

No worries at all if you don't have time to respond. We fully appreciate how important your time is.

Best,

Kristen

Subject: ARB therapy in Covid-19 infection

Thank you for responding to my email yesterday about the possibility of ARB therapy in treatment of coronavirus infection. I realize that your research is ongoing. Would you anticipate, however, that the ARB with the most potential role in preventing virus attachment would be the one that has the greatest affinity for the AT2 receptor? Am I correct that losartan is the ARB with the lower receptor (AT1 vs AT2) selectivity and might logically be the most promising ARB to investigate? Thanks. Dr Thomas Leopold

Subject: Coronavirus

Dear Dr Fauci,

I heard this idea on a radio interview with Laurie Garrett this morning – how about getting your committee (or one of the government health agencies) to produce a series of short YouTube videos on how to combat the coronavirus: such things as proper handwashing technique, when to wear a mask, how to ride the subway safely, etc, etc. I think this would be an excellent way to reach the public in the digital age (provided that Mike Pence doesn't try to turn them into campaign ads for Donald Trump), and I strongly urge you to give the strategy serious consideration. I know I would watch them and I'm sure millions of other people would too.

Sincerely,

Paul Hanke

Subject: Report from 'HHS COVID-19 Situation Update' call today

Passing on some main points from of an "HHS COVID-19 Situation Update" call that took place at 3pm today, FYI.

- The meat of the call was a situation update by Nancy Messonnier (with epi numbers below).
- She noted that the national strategy is still containment.
- However, since there are some US locales with evidence of community spread, there is consideration if some "community level action" may be appropriate, with a move towards a blend of mitigation/containment in certain areas.

Global epi update:

China lab/clinically confirmed cases: 79,824 (+573 in last 24h)
China deaths: 2,870

61 international locations with 7,102 cases so far (Armenia, Ecuador, Ireland, Luxembourg new in last 24h)

107 international deaths

Widespread community transmission occurring in:
China, Iran, Italy, Japan, S. Korea

US epi update:

63 confirmed US cases (16 diagnosed here, 3 in Hubei repatriates, 44 in Diamond princess repatriates)
11 presumptive cases (meaning they tested + at state public health labs, but confirmatory test at CDC is pending)

663 Persons Under Investigation

Subject: SARS-CoV-19

Although outside my main area of expertise I have been keeping up with CoVid-19 discussion. One item I have noted is that the disease appears to have a lower incidence in children. The other is that the virus appears to at least in part attach through cell membrane angiotensin II type 1 receptors. Is the lower incidence of the disease in children possibly due to this cohort having a higher proportion of angiotensin II type 2 receptors compared to the adult cohort?

Subject: Invitation to speak to the National Economists Club

Dear Dr. Fauci,

My name is Emily Sanchez and I am an economist at the American Chemistry Council. I am reaching out to you in my capacity as President of the National Economists Club (NEC), which is an organization of over 1000 government and private sector economists based in DC. The NEC holds weekly luncheon events which feature notable experts and economists in Washington.

Increasingly, economists are being asked to assess the economic impacts around the incidence and spread of the corona virus as well as the impact of reduced economic activity due to behavioral changes (e.g. people not leaving their homes to work or shop, supply chain disruptions, etc.). As economists are tasked in assessments, scenario planning and communicating their estimates, accuracy around their assumptions and understanding of the corona virus and Covid-19 is imperative. We are incredibly appreciate of the important work and research that the National Institute of Allergy and Infectious Diseases provides and we are wondering if you would be willing to speak at one of our luncheons about Covid-19 and the latest developments.

Do you think you might have time in your schedule to speak to the National Economist Club this month? We would love to have you speak during the week of March 16-20.

Our luncheons typically take place at the Chinatown Garden Restaurant, 618 H St. NW, with lunch at noon and your presentation from 12:30 p.m. til 1:30 p.m. Talks are normally on the record and open to the press, unless you request otherwise.

Thank you for your consideration.

Best regards,

Emily

To: Fauci, Anthony (NIH/NIAID) [E] (b) (6) >
Subject: Have you been muzzled?

Reference: I'm the nuclear/aerospace engineer who subsequently obtained an MPH at the University of Washington since I was working disease transmission within commercial airlines when I was a Boeing employee. And, my undergraduate degree is in chemistry with a minor in microbiology. I've engaged you previously.

Hi Dr. Fauci,

You've kindly allowed me to engage you, and I'll take advantage of that kindness.

The news media is reporting that the White House has muzzled you. Is that true? Before entering the science/engineering world, I was a newspaper city editor in Southern CA (in the 1970s). Therefore, I get and understand the idea of coordinated messaging. (Plus, due to my media background, Boeing used me to help executives prepare for media engagements on challenging topics.) However, if it's true that you are muzzled, then I will initiate a "campaign" with my congressional representatives and the media to

stop that action. (

(b) (6)

However, ***before I initiate such a campaign, will my actions possibly cause you harm?*** I recognize that you may have backchannels that I may disrupt by engaging.

As I related previously, I trust you since you focus on facts and data, you provide context for the information that you share, and you avoid emotion in your engagements. I think that residents of the US (and, frankly the world) need your insights regarding COVID-19. Plus, you're one of the world leaders with regard to infectious diseases. And, if you don't know, you know whom to ask.

Please let me know if I should stay silent or become noisy.

Thank you. And, thanks for your service to the US and the world during this very interesting time.

Thomas Murray

Subject: Fc modifications for protective anti-COVID-19 antibodies

Dear Tony,

I wanted to share a very recent and surprising result we've obtained on the mechanism of antibody protection for anti-viral antibodies. We've previously shown that bNAbs to flu and HIV require FcR engagement for their in vivo potency.

Enhancing activating FcR engagement increases the potency of these antibodies by an order of magnitude, on average, and thus are significant contributors to anti-viral protection.

We'll be writing up this story shortly and would be happy to share a pre-print with you.

Sincerely,

Jeff

Subject: Novel Treatment for Reducing Symptoms Associated with Coronavirus (COVID-19) - "Non-Confidential"

Dear Dr. Fauci,

Sen-Jam Pharmaceutical has a product under development to reduce the symptoms associated with Upper Respiratory Infection (URI). We believe it could provide relief to a large number of people during the COVID-19 pandemic. Our product SJP-002 is a combination of an NSAID and a non-sedating antihistamine and does not include a decongestant. Removing the decongestant makes our product ideal for treating the symptoms associated with COVID-19 in patients with cardiac conditions who cannot tolerate taking a decongestant.

What makes our product novel is that it can be administered early in the treatment phase, thereby reducing the excessive accumulation of inflammation, which typically results in head congestion, pulmonary congestion, coughing, & sneezing. Our experience has shown that at the 1st signs of experiencing symptoms of URI an individual's symptoms can be drastically reduced after taking our

product twice a day for 3 days. The dramatic reduction in inflammation has the potential to reduce the spreading of the virus by means of cough, sneezing, and spreading of germs through contact. Currently, when individuals experience the start of a URI, there is little effective intervention available to change the course of the infection. Individuals delay administering pharmaceutical agents, until their congestion becomes intolerable and excessive.

Attached is a copy of our early research and a copy of our non-provisional patent. I share this information with the hope of providing some background for an immediately accessible, safe treatment, alternative to slow the pace and impact of the pandemic.

Let me know if we can be of any additional help?

Thanks and all the best,

Jim

Subject: Info re Covid-19

Dear Dr. Fauci,

Those of us who seek factual, scientifically-based information to the highest degree that it is possible to obtain it will remain hungry and on the alert for whatever complete, up-to-the-moment information that you may have as humanity proceeds deeper into the Covid-19 potential pandemic. We have trusted you through several previous epidemics to provide such information. Therefore, I know I'm not alone in being appalled and frightened by President Trump wanting you to issue information about the current crises only after it has been cleared by his administration. In his office as President, Donald Trump may be *de facto*, Commander-in Chief. There is nothing about his office that confers Expert-in-Chief on him, and what he chooses to say or not say about Covid-19 and its spread should not be treated by the media or anyone as information that is trustworthy for being factual and scientifically-based information to the highest degree that it is possible to obtain.

I hope that you will find it in yourself and in the mission of your office to publicly assure the American public in no uncertain terms that you will not be censored, and that you will honor the public's trust to continue to provide real, research-based information about the frightening health nightmare that all humans are facing in a way that distinguishes us from China's government in its disgraceful and destructive efforts to muzzle those experts who might be able to save lives by merely speaking truth to a population whose health depends on having fact-based, totally un-massaged knowledge as soon as it is available.

It is with our lives, the lives of our families, and the lives that make up our nation that we are counting on you.

Sincerely yours,
Lawrence O. Brown, Ph.D.

> Thanks for the note. I hope that all is well with you. I have never been given orders to get approval from the VP's people to speak publicly about coronavirus. Ever since I have been doing this since the Reagan administration, whenever a member of the Executive Branch such as me gets invited and goes on National TV such as the Sunday Talk shows, there is always a routine process of clearing it with your department (in this case HHS) who then clears it with the White House. This is routine and has been true for the Reagan, Bush '41, Clinton, Bush'43, Obama, and now the Trump administration. It is merely a formality so that they know what is coming out from the executive branch. I have always gotten clearance with very few exceptions over the past 35 years (usually because they do not want you on TV at the same time that the President is making an important announcement). I have never been muzzled or told that I could not speak out publicly about anything during this administration.

Daniella sits down with renowned immunologist Dr. Anthony Fauci to discuss how the United States has and can continue to combat the HIV/AIDS epidemic, both domestically and abroad.

<https://www.americanprogress.org/issues/healthcare/news/2019/08/15/473666/dr-anthony-fauci-global-fight-hivaids/>

For decades, the HIV/AIDS epidemic has been among the most challenging global health issues to contain. Enter Dr. Anthony Fauci, immunologist and director of the National Institute of Allergy and Infectious Diseases at the National Institutes of Health. As one of the foremost experts and advocates against the HIV/AIDS epidemic, Dr. Fauci exuded optimism when talking about the progress being made in both global and domestic containment of the disease. He sat down with Daniella for an interview to discuss his work fighting HIV/AIDS and to share his thoughts on the growing, dangerous anti-vaccination movement.

Tony,

Watching the spread of the Coronavirus worldwide(?), I can't help but feel for you, as well as the world's population.

It must be both challenging as well frustrating to be unable to control every important "leak" and then watching the consequences.

I would think it's also sort of exciting, while also being horrible, given this is what you've trained for most of your professional life.

And, I would think that most of your other important works need to be put on hold?

Wishing you (and all of us) the best of luck,

Howard

Subject: RE: Question

Andy:

Thanks for the note. I am sure that the Chinese are looking at this, but I have not seen any data in this regard. I will try to find out if anyone is looking at this in the USA patients.

Best regards,

Tony

Subject: Question

Tony

Does anyone know what the NK cell profile was like in patients who succumbed to Coronavirus? Is there a difference in immune profile between mild and severe cases?

Anyone looking at that?

Miss being there at your side in this battle Andy PS Thank you and your team for guiding the Celularity team to get it right. Also you have as always, my utmost respect for being the "good and faithful servant"

Subject: 500k dead? (Background)

Hello Dr Fauci: Hope you're holding up well. Remember to rest and hydrate!

We had a DHS person tell us epidemiology models for US show worst case scenario 98m get COVID-19 and 500k dead.

I've seen models all over the board. And Dr Jen and I are keeping our coverage on point on what we know and what we don't know.

If that a possible number for our planning? Or is that outlandish?

Thx.

Dear Dr. Fauci:

I reviewed the publications about the last 2 coronavirus infections. Both MERS and SARS were severe, short lived problems that have not recurred. One would expect Covir-19 to follow a similar path: infect a wide group of susceptible people and then disappear, If that is so, anything that is more than six months away may not be of value—remdisivir or a vaccine. Even if remdisivir works, it will take months to produce sufficient amounts to treat this illness.

Has ribavirin been assessed for an ability to slow down the replication of this virus? We do not need to eradicate the virus. Just slowing down the rate of symptoms progression would allow time for the immune system to mount a curative response.

Ribivirin is the only approved anti-viral that may have shown some clinical benefit against similar coronavirus infections, but the reports are anecdotal and the benefit short term. It was only administered to a few patients who were already on respirator support, and most still died. If their lungs were already destroyed, eliminating the virus would not change the outcome. There were no studies of treating mild illnesses before they progressed to needing respirator support. If the 50 year old coronavirus patient described in the Lancet had been treated in first week of symptoms, before needing respiratory support, he may have survived. On autopsy, most of his lung had been destroyed.

If ribavirin has even marginal benefit, decreasing hospitalization by 10% yields an enormous savings. I do not have access to the data on this virus and the possible effects of the antivirals that have been evaluated. However, ribavirin has any effect on viral proliferation, we can write and a randomized trial of ribavirin. [REDACTED] (b) (4)

[REDACTED] (b) (4)

I look forward to hearing from you about the data on ribavirin against this virus and your thought on this clinical study.

Sincerely,

William H. Sherman, M.D.

Hi Dr. Fauci,

The whole country is in a panic, could you write on behalf of the NIH regarding the coronavirus, please?
Your voice is very important on this topic.

Thanks,
Sabrina

Hi Dr. Fauci,

It was nice meeting you at the event regarding the coronavirus today at The Aspen Institute. Your expert voice on the virus would be great to have in our publication.

As I mentioned, I am an opinion editor at The Hill and one of the areas that I focus on is health care. Please let me know if you'd like to discuss some ideas. I look forward to hearing from you!

Best,
Sabrina

Dr. Fauci,

Greetings from the Brookings Institution. I'm writing to share the attached invitation for you to speak to our Board of Trustees at their annual dinner on Thursday, March 5 here in Washington, DC. The Brookings Board is a distinguished group of business and community leaders ... I know they would be very eager to hear your thoughts, especially on the coronavirus crisis given its spread into the U.S. If this date does not work with

your schedule, we'd be glad to welcome you to Brookings at a more convenient time.

I very much appreciate you considering our request, Dr. Fauci!

My very best,

John R. Allen
President
The Brookings Institution
